

The screenshot shows a VS Code editor window with a Python script in the main editor and its output in the console. The script is located at `C:\Users\USER\Desktop\Python\進階python程式設計\B10802050課堂練習14-2.py`. The script uses the `re` module to find all area numbers in a message and prints them sorted and as a set.

```
1 import re
2
3 msg = '赴酬者聯盟會員輸入聯絡資料: 矮巨人好客: 02-25925252, 米果隊長: (03) 5374281, 捕茶索爾: 03-4542-542, X同學: 037-45
4
5 area_num = re.findall(r'\d+', msg)
6 print(f'由小而大: {sorted(area_num)}')
7
8 set_area_num = set(area_num)
9 print(f'不可重複: {set_area_num}')
10
```

The console output shows the following results:

```
由小而大: ['02', '03', '03', '03', '04', '05', '06', '07']
不可重複: {'04', '03', '02', '06', '07', '05'}
```

由小而大: ['02', '03', '03', '03', '04', '05', '06', '07']
不可重複: {'04', '03', '02', '06', '07', '05'}
